What does your college experience lack in? I want to get my Master's Degree in Astrophysics because I always wanted to be a astronaut and work for NASA because space is endless and there's so much information to know like learning how to control a satellite or calculate the acceleration of a rocket and even discovering new planets, solar systems and etc. I hope to study Math because I love math and in order to become an astronaut I need to have a degree in Math and physics. My dream job is to be an astronaut because I love making rockets, discovering new planets and even studying the Sun! All of the history of space for the United States began with Saturn V, the first rocket to send a man to the Moon. The college that I want to go to is Harvard University which was founded in 1636 and it has the best education with the smart teachers and students, the amazing resources and the opportunities to get a good job!
